- Python
- Java
- PHP
- JavaScript
- Node.JS & Express
- HTML
- CSS
- React.JS
- UI/UX Design with Figma
- Git & Github

PROJECTS

Invoice Application

Developed a web-based invoice application using SCSS, React, and Figma for storing invoice and payment details, and editing and deleting invoice details.

E-Tourism Website

Developed a front-end website using HTML, CSS, and JavaScript for tourist who wishes to visit and tour historic places and landmarks, book a bus for transport, and make payment for accommodation.

Mobile Money Management System with Java

Developed a mobile money management system using Java with a graphical user interface for managing money, paying bills and utilities, and checking balances.

Student Chatbot Application using PHP

Developed a functioning chatbot using PHP programming language from scratch for students where they can interact with the chatbot and request specific information.

Food Ordering System using JavaScript

Designed a front-end food ordering system with JavaScript for food-selling vendors where customers can view and place an order for available food with ease.
